Laser-plasma Acceleration : Proceedings of the International School of Physics "Enrico Fermi", Varenna on Lake Como, Villa Monastero, 20-25 June 2011 Fernando Ferroni, Leonida Antonio Gizzi, Riccardo Faccini, 2012 Impressive progress has been made in the field of laser-plasma acceleration in the last decade, with outstanding achievements from both experimental and theoretical viewpoints. Closely exploiting the development of ultra-intense, ultrashort pulse lasers, laser-plasma acceleration has developed rapidly, achieving accelerating gradients of the order of tens of GeV/m, and making the prospect of miniature accelerators a more realistic possibility. This book presents the lectures delivered at the Enrico Fermi International School of Physics and summer school: 'Laser-Plasma Acceleration', held in Varenna, Italy, in June 2011.

Intraoperative Ultrasound (IOUS) in Neurosurgery Francesco Prada, Luigi Solbiati, Alberto Martegani, Francesco DiMeco, 2016-03-08 This book is intended as a practical manual on the use of intraoperative ultrasound (IOUS) as a tool for imaging guidance during cranial and spinal neurosurgical procedures. Full account is taken of the emergence of novel clinical applications and recent technical advances, with extensive coverage of the impact of developments such as improved probe technology, fusion imaging and virtual navigation, 3D ultrasound imaging, contrast-enhanced ultrasound, and elastosonography. Basic principles of ultrasound are elucidated in order to assist in the optimal use of IOUS and clear guidance is provided on the interpretation of imaging findings in various pathologies. Informative comparisons are also made of the use of techniques such as fusion imaging and contrast-enhanced ultrasound in general radiology and neurosurgery. The aim of the authors is to enhance the general knowledge regarding intra-operative ultrasound brain imaging, standardizing its use and exploring new techniques, leading in some way toward compensating the lack of specific training in the application of ultrasound among the neurosurgical community. IOUS is a sensitive tool that can improve surgical precision and help to reduce morbidity.

Communication in Cancer Care F. Stiefel, 2006-09-13 This book covers all the relevant aspects of communication in cancer care, such as communication in cancer prevention and genetic counseling, communication at different stages of disease and communication with the family and children. In addition, more general topics are discussed, such as the benefits

and evidence of communication skills training and the challenges of interdisciplinary and cross-cultural communication.

Handbook of Neurological Therapy Carlo Colosimo, Antonio Gil-Nagel, Nils Erik Gilhus, Alan M. Rapoport, Olajide Williams, 2015 This is a practical book on neurological therapy. It is aimed at giving concise and updated answers to busy practicing clinicians in the clinic, ward, or emergency department. An evidence-based approach is used, but when there is no evidence or the data are inconclusive, an expert opinion is always given in order to meet the expectations of the reader. All neurological conditions, common and less common, are discussed; each chapter has a similar format, and contains an initial brief introduction on the epidemiology and clinical features of each disease. The therapy is then discussed, including pharmacological and non-pharmacological, with wide use of Tables & Figures. Flowcharts are also included in most of the chapters.

Malignant Brain Tumors Jennifer Moliterno Gunel, Joseph M Piepmeier, Joachim M. Baehring, 2016-12-28 This text addresses all aspects of patient evaluation and care. This includes new findings in imaging that provide a better understanding of the extent of the lesion as well as its relationship with critical neuroanatomic function. The evolution of intraoperative imaging, functional brain mapping, and technology to identify tumor from brain is covered. This has significantly improved the ability of surgeons to more safely and aggressively remove tumors. More importantly, a better understanding of tumor biology and genomics has created an opportunity to significantly revise tumor classification and better select optimal therapy for individual patients. The text covers novel and innovative treatment options including immunotherapy, tumor vaccines, antiangiogenic agents, and personalized cancer treatment. In addition, novel agent delivery techniques are covered to offer the potential for increasing the effectiveness of treatment by delivering active agents directly where they are needed most. **Malignant Brain Tumors: State-of-the-Art Treatment** provides a comprehensive overview of treatment for malignant gliomas, and will prove useful by updating physicians on new therapeutic paradigms and what is on the horizon for the near future. This text will be informative for surgeons, oncologists, neurologists, residents and students who treat these patients, as well as those who are training for a career in managing patients with these challenging tumors.

Surgical Neuro-Oncology Russell R. Lonser, J. Bradley Elder, 2018-11-09 Part of the Neurosurgery by Example series, this volume on surgical neuro-oncology presents exemplary cases in which renowned authors guide readers through the assessment and planning, decision making, surgical procedure, after care, and complication management of common and uncommon disorders. The cases explore a number of different types of nervous systems tumors, including glioblastoma, medulloblastoma, skull tumors, and more. **Surgical Neuro-Oncology** is appropriate for neurosurgeons who wish to learn more about this subspecialty, and those preparing for the American Board of Neurological Surgery oral examination.

Yann Tiersen - Kerber Yann Tiersen, 2021-07-01 (Piano Solo Songbook). I think there is a similarity between the infinite big and the infinite smallness of everything, says Yann Tiersen. It's the same experiment looking through a microscope as it is a telescope. Named after a chapel in a small village on the island of Ushant, Kerber marks a new chapter in critically-acclaimed composer Yann Tiersen's career. A chapter still true to Tiersen's nuanced and subtle approach but one that sets out with his most overtly electronic material to date. Beautifully textured, highly immersive and thoughtfully constructed, Tiersen creates an electronic world, providing an environment in which the piano source exists. A sense of place has often been a central theme in Tiersen's work and here that is no different. Each track is tied to a place mapping out the immediate landscape that surrounds Tiersen's home, linking back to his thoughts on the possibilities of the infinite smallness. This official, exclusive folio is beautifully printed on high-quality, uncoated paper with striking graphic artwork. All seven pieces are presented for solo piano and follow an exclusive introduction to the project.

Drug Delivery Systems in Cancer Therapy Dennis M. Brown, 2003-09-08 Leading experts survey the currently available technologies designed to improve the delivery of today's cancer chemotherapeutic agents. The authors review both the theoretical and practical considerations governing conventional and nonconventional methods of drug administration, and identify promising opportunities for product development. In their outline and discussion of the use of novel formulation technologies-including synthetic polymers and biomaterials for prolonged or sustained drug release to achieve potentially greater therapeutic effect-they profile those technologies that have resulted in a number of approved and late-stage clinical products.

Cancer Clinical Pharmacology Jan H. M. Schellens, Howard L. McLeod, David R. Newell, 2005-05-05 The book considers both the theory and practice of clinical pharmacology where it is relevant to cancer treatment. It covers the basics of clinical

pharmacology in oncology and cancer therapeutics, discussing the specific classes of anti-cancer agents in detail. Edited and written by a mix of generalist cancer clinical pharmacologists and sub-specialists within this area, the book allows the reader to develop both general clinical pharmacology skills and specialist knowledge for particular cancer chemotherapy agents.

As such, it is a must-have for neurosurgical residents, fellows, practicing neurosurgeons, and allied healthcare practitioners who treat patients with brain conditions.

New Challenges for Cancer Systems Biomedicine Alberto D'Onofrio, Paola Cerrai, Alberto Gandolfi, 2013-01-25 The future of oncology seems to lie in Molecular Medicine (MM). MM is a new science based on three pillars. Two of them are evident in its very name and are well known: medical science and molecular biology. However, there is a general unawareness that MM is firmly based on a third, and equally important, pillar: Systems Biomedicine. Currently, this term denotes multilevel, hierarchical models integrating key factors at the molecular, cellular, tissue, through phenotype levels, analyzed to reveal the global behavior of the biological process under consideration. It becomes increasingly evident that the tools to construct such

complex models include, not only bioinformatics and modern applied statistics, as is unanimously agreed, but also other interdisciplinary fields of science, notably, Mathematical Oncology, Systems Biology and Theoretical Biophysics.

Psychoanalysis and Narrative Medicine Peter L. Rudnytsky, Rita Charon, 2008-01-17 In this pioneering volume, Peter L. Rudnytsky and Rita Charon bring together distinguished contributors from medicine, psychoanalysis, and literature to explore the multiple intersections between their respective fields and the emerging discipline of narrative medicine, which seeks to introduce the values and methods of literary study into clinical education and practice. Organized into four sections—contextualizing narrative medicine, psychoanalytic interventions, the patient's voice, and acts of reading—the essays take the reader into the emergency room, the consulting room, and the classroom. They range from the panoramas of intellectual history to the close-ups of literary and clinical analysis, and they speak with the voice of the patient as well as the physician or professor, reminding us that these are often the same.

Experimental Metastasis: Modeling and Analysis Anastasia Malek, 2013-12-02 Metastatic dissemination of cancer is a main cause of cancer related deaths, therefore biological mechanisms implicated in metastatic process presents an essential object of cancer research. This research requires creation and utilization of adequate laboratory models. The book describes main approaches to model processes of metastatic cancer dissemination and metastases development. The book is structured in according with various metastatic pathways reflecting molecular specificity of metastatic process as well as anatomical specificity of area of dissemination. Each chapter is introduced by short discussion of clinical aspects of certain metastatic pathway. Especial attention is paid for methods of visualization, quantification and analysis of the modeled metastases. Additional chapter is devoted to methods of mathematic modeling of tumor spread. The data presented in the book may be helpful for cancer researchers and oncologists.
